

RAJA SENTHILKUMAR

Frontend Developer | React.js | Next.js | Immediate Joiner

Chennai, India | raja2001ece@gmail.com | +91 99528 46346 | [linkedin.com/in/raja2001](https://www.linkedin.com/in/raja2001) | raja-portfolio-three.vercel.app

SUMMARY

Frontend Developer with 3+ years of experience building and scaling modern web applications using React.js, Next.js, JavaScript (ES6+), and TypeScript, with hands-on backend integration using Node.js, REST APIs, and GraphQL. Proven track of record delivering real-time analytics dashboards, secure payment workflows (Stripe), and role-based authentication (Keycloak, AWS Cognito, JWT). Experienced in Agile/Scrum delivery, Git-based version control, and building reusable, component-driven UI libraries.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, JavaScript (ES6+), TypeScript, Redux, Hooks, TanStack Query, Tailwind CSS
- **Backend:** Node.js, Express.js, GraphQL (Apollo Server), REST APIs, WebSocket / Socket.IO
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Authentication & Security:** Keycloak (RBAC, SSO), JWT, AWS Cognito, Role-Based Access Control (RBAC)
- **Cloud & DevOps:** AWS S3, Git, GitHub, Jira, Agile / Scrum
- **Third-Party Integrations:** Stripe (Billing & Subscriptions), Apache Superset, Konva.js (Canvas)

EXPERIENCE

Software Developer

10/2024 – 04/2026

Twilight IT Solutions Pvt Ltd — Puducherry, India (On-site)

- Led frontend development of a real-time Fleet Management System using React.js, Java, PostgreSQL, and Socket.IO, delivering live GPS tracking across 100+ vehicles simultaneously with sub-second update latency.
- Integrated Apache Superset with custom SQL queries for fuel analytics and time-series forecasting, embedding charts into the React application via REST API, reducing manual reporting time by 80%.
- Built and shipped core modules of GoPerla, a multi-tenant SaaS Document Analysis Platform, including Stripe subscription billing, AWS Cognito authentication, AWS S3 file storage, and a GraphQL API layer.
- Participated in Agile/Scrum sprint ceremonies, conducted peer code reviews, and authored technical documentation across 25+ shipped features.

Junior Software Developer

04/2023 – 09/2024

App Xperts Private Limited — Puducherry, India (On-site)

- Build the ULCMS e-Learning Management System end-to-end using React.js, Node.js, PostgreSQL, and Keycloak-based RBAC for three distinct user roles.
- Built a browser-based Video Editor using Konva.js with drag-and-drop canvas editing, layer management, object transformation, and a full undo-redo history stack.
- Utilized React Query for optimized data fetching, caching, and optimistic UI updates across two production projects, eliminating redundant API calls and improving perceived performance by 60%.
- Established and maintained a shared reusable component library (forms, tables, modals, progress indicators) reused across 5+ internal projects.

Software Development Intern

12/2022 – 03/2023

App Xperts Academy — Puducherry, India (On-site)

- Assisted in frontend development using React.js and gained hands-on exposure to Node.js REST APIs, PostgreSQL queries, and Git-based collaborative workflows.
- Completed structured training in JavaScript (ES6+), React component architecture, and responsive UI design using CSS3 and Bootstrap.

PROJECTS

Fleet Management System

Domain: Transportation / Telematics | Stack: React.js, Java, PostgreSQL, Konva.js, Socket.IO, Apache Superset

- Architected an end-to-end real-time fleet monitoring dashboard enabling live GPS path visualization across 100+ vehicles simultaneously with sub-second WebSocket update latency.
- Created interactive geofence polygon drawing via Konva.js with server-side event triggers dispatching instant push alerts on zone entry/exit.
- Wrote advanced PostgreSQL queries (window functions, CTEs, multi-table joins) to compute fuel consumption, per-route costs, and driver efficiency rankings; embedded Apache Superset forecasting charts via REST API.

GoPerla – SaaS Document Analysis Platform

Domain: SaaS / Document Intelligence | Stack: React.js, Node.js, GraphQL, MongoDB, Redis, AWS Cognito, AWS S3, Stripe

- Developed a multi-tenant SaaS architecture with per-organization data isolation using JWT-based tenant-resolution middleware and AWS Cognito claims.
- Designed a secure document upload pipeline using pre-signed S3 URLs, transferring files directly from the browser to S3 and triggering async processing jobs.
- Integrated Stripe for multi-tier subscription billing with proration, usage-metered billing, webhook reconciliation, and automated invoicing; added a Redis caching layer and Suspense-based code splitting to improve Lighthouse scores.

ULCMS – E-Learning Management System

Domain: Education / E-Learning | Stack: React.js, Node.js, PostgreSQL, Keycloak, React Query

- Provided a full-stack LMS with role-segregated dashboards for Super Admin, Instructor, and Student roles, Applied via Keycloak realm roles and JWT validation on every API route.
- Built a dynamic quiz engine (MCQ, true/false, short-answer) with auto-grading, instant feedback, and PostgreSQL-trigger-enforced course progression.
- Used React Query for all data-fetching with stale-time configuration and optimistic updates; built a reusable Tailwind CSS component library used across 30+ screens.

Video Editor – Poster & Video Customization Tool

Domain: Media & Design | Stack: React.js, Konva.js, PHP, PostgreSQL

- Built a fully browser-based visual editor using the Konva.js HTML5 Canvas API for designing custom posters and video overlays with images, text, and stacked layers.
- Built history stack using the Command pattern, serializing each user action as a reversible command object supporting unlimited undo steps.
- Built the PHP backend with a PostgreSQL schema to persist template definitions and serialized canvas state (JSON), with auto-save and full project restoration on login.

EDUCATION

Bachelor of Technology – Electronics & Communication Engineering

07/2018 – 05/2022
